R E Mamel Breast pain (mastalgia) alone or in association with lumpiness is reported in up to a half of all women attending breast clinics. Two thirds of a group of working women and 77% of a screening population admitted to having had recent breast pain when directly questioned.

ABC of Breast Diseases: Breast Pain | The BMJ

Breast cancers are derived from the epithelial cells that line the terminal duct lobular unit. Cancer cells that remain within the basement membrane of the elements of the terminal duct lobular unit and the draining duct are classified as in situ or non-invasive. An invasive breast cancer is one in which there is dissemination of cancer cells outside the basement membrane of the ducts and ...

ABC of Breast Diseases: Breast Cancer | The BMJ

Between 1% and 5% of men and women have supernumerary or accessory nipples or, less frequently, supernumerary or accessory breasts. These usually develop along the milk line: the most common site for accessory nipples is just below the normal breast, and the most common site for accessory breast tissue is the lower axilla. Accessory breasts below the umbilicus are extremely rare.

The ABC of Breast Diseases provides comprehensive guidance to the assessment of symptoms, how to manage all common breast conditions and guidelines on referral. It covers congenital problems, breast infection and mastalgia, before addressing the epidemiology, prevention, screening and diagnosis of breast cancer.

ABC of Breast Diseases (ABC Series) eBook: Dixon, J. ...

Neonatal breast infection is most common in the first few weeks of life when the breast bud is enlarged. Although Staphylococcus aureus is the usual organism, Escherichia coli is occasionally the pathogen. If an abscess develops the incision to drain the pus should be placed as peripheral as possible to avoid damaging the breast bud.
