Report 25 consists of a CD-ROM containing 11 spreadsheet models, which include practical learning exercises and several airport-specific sample data sets to assist users in determining appropriate model inputs for their situations, and a user's guide to assist the user in the correct use of each model. The models on the CD-ROM include such aspects of terminal planning as design hour determination, gate demand, check-in and passenger and baggage screening, which require complex analyses to support planning decisions. The CD-ROM is also available for download from TRB's website as an ISO image.

This new edition of Airport Engineering will respond to this shift in the growth of airports globally, with a focus on the role of the International Civil Aviation Organization (ICAO), while still providing the best practices and tested fundamentals that have made the book successful for over 30 years.

"Describes best practices and specific design considerations and presents decision-making frameworks for implementing passenger conveyance systems. Passenger conveyance components include escalators, elevators, moving walkways, and passenger assist vehicles/carts.

Automated People Mover systems (the subject of ACRP Reports 37 and 37A), personal rapid transit systems, and shuttle bus systems are not covered in the Guidebook. In addition to the Guidebook, ACRP Report 67 also includes a comprehensive database along with a Decision-Support Tool for planning, designing, and evaluating passenger conveyance systems at airports as a function of specific airport design and operating parameters. This database allows project planners to examine how passenger conveyance components operate as a system throughout different areas within the airport environment."--Foreword.
