Amplitude Modulation Exam Solutions

Amplitude Modulation Exam Solutions In general, amplitude modulation definition is given as a type of modulation where the amplitude of the carrier wave is varied in some proportion with respect to the modulating data or the signal. As for the mechanism, when amplitude modulation is used there is a variation in the amplitude of the carrier.

Online Library Amplitude Modulation Exam Solutions has a peak amplitude of $2K = 2$, so that $K = 1$. At the point in time when the modulating cosine wave is zero, the total signal is $A = 2$, so $K/A = 0.5$. Therefore, the signal has 50% modulation.
