The purpose of this document is to illustrate the time-dependent Table Array technique for describing time-dependent loading when using the ANSYS Mechanical APDL finite element analysis program, with a blend of rapidly-changing loads and slowly-changing loads in the model, as often seen in thermal transient work. The Thermal Model Example. A simple ANSYS thermal model is built with 8-node brick SOLID70 thermal elements. A solid bar is formed and map meshed. The only load on this model will ...

## Ansys Transient Thermal Analysis Tutorial

This tutorial was created using ANSYS 7.0 to solve a simple transient conduction problem. Special thanks to Jesse Arnold for the analytical solution shown at the end of the tutorial. The example is constrained as shown in the following figure. Thermal conductivity ( $k$ ) of the material is  $5 \text{ W/m}\cdot\text{K}$  and the block is assumed to be infinitely long.
