For this application, the first approach is to extract the feature or rather the geometrical feature set representing the signature. With these feature sets, we have to train the neural networks using an efficient neural network algorithm. This trained neural network will classify the signature as being genuine or forged under the verification ...

Artificial neural network - Wikipedia

A multilayer perceptron (MLP) is a class of feedforward artificial neural network (ANN). The term MLP is used ambiguously, sometimes loosely to any feedforward ANN, sometimes strictly to refer to networks composed of multiple layers of perceptrons (with threshold activation); see § Terminology.Multilayer perceptrons are sometimes colloquially referred to as "vanilla" neural networks ...

Multilayer perceptron - Wikipedia

An artificial neural network (ANN) is a computational model to perform tasks like prediction, classification, decision making, etc. It consists of artificial neurons. These artificial neurons are a copy of human brain neurons. Neurons in the brain pass the signals to perform the actions.
