the disruption to cash flow impacted their ability to fund and fulfil larger contracts. Managing director Wendy Etheridge said: "This year started with a bang and was just getting better and better.

It used to take years or even decades for disruptive innovations to dethrone dominant products and services. But now any business can be devastated virtually overnight by something better and cheaper. How can executives protect themselves and harness the power of Big Bang Disruption? Just a few years ago, drivers happily spent more than \$200 for a GPS unit. But as smartphones exploded in popularity, free navigation apps exceeded the performance of stand-alone devices. Eighteen months after the debut of the navigation apps, leading GPS manufacturers had lost 85 percent of their market value. Consumer electronics and computer makers have long struggled in a world of exponential technology improvements and short product life spans. But until recently, hotels, taxi services, doctors, and energy companies had little to fear from the information revolution. Those days are gone forever. Software-based products are replacing physical goods. And every service provider must compete with cloud-based tools that offer customers a better way to interact. Today, start-ups with minimal experience and no capital can unravel your strategy before you even begin to grasp what's happening. Never mind the "innovator's dilemma"—this is the innovator's disaster. And it's happening in nearly every industry. Worse, Big Bang Disruptors may not even see you as competition. They don't share your approach to customer service, and they're not sizing up your product line to offer better prices. You may simply be collateral damage in their efforts to win completely different markets. The good news is that any business can master the strategy of the start-ups.

Larry Downes and Paul Nunes analyze the origins, economics, and anatomy of Big Bang Disruption. They identify four key stages of the new innovation life cycle, helping you spot potential disruptors in time. And they offer twelve rules for defending your markets, launching disruptors of your own, and getting out while there's still time. Based on extensive research by the Accenture Institute for High Performance and in-depth interviews with entrepreneurs, investors, and executives from more than thirty industries, Big Bang Disruption will arm you with strategies and insights to thrive in this brave new world.

In recent years a new-disquieting-form of disruptive innovation has emerged, one that beats incumbents on both price and quality right from the start and quickly sweeps through every customer segment. This kind of "big bang" disruption can devastate entire product lines virtually overnight. Look at the effect that free navigation apps, preloaded on smartphones, had on the market for devices made by TomTom, Garmin, and Magellan. Big-bang disruptions often come out of the blue from people who aren't your traditional competitors. Frequently, they're developed by inventors who are just doing low-cost experiments with existing technologies to see what new products they can dream up. Once launched, these innovations don't adhere to conventional strategic paths or normal patterns of market adoption. That makes them incredibly hard to combat. Though technology- and information-intensive firms are most vulnerable to big bangs, mature industries face this threat, too. Credit cards, automobiles, and education, for instance, are all experiencing early warning signs. But in every industry, big-bang disruption will be keeping executives in a cold sweat for a long time to come. This article, which originally appeared in Harvard Business Review, offers some strategic principles to help businesses survive big bangs.

Cites hundreds of examples of new products and services that are entering their markets better and cheaper than established and often more regulated ones, outlining a radical framework that companies can use to protect themselves at four key stages of competitive innovation.

It used to take years for new products and services to dethrone industry leaders. Now any business, in any industry, can be instantly devastated by a start-up offering something better and cheaper. How can you protect yourself, and harness the power of Big Bang Disruption? The good news is that any business can master the strategy of the start-ups. In this essential book, Larry Downes and Paul Nunes draw on extensive research by the Accenture Institute for High Performance and interviews across 30 industries to give you the tools to take control of your future.

* Our summary is short, simple and pragmatic. It allows you to have the essential ideas of a big book in less than 30 minutes. As you read this summary, you will discover the mechanisms of disruption, as well as strategies to survive and succeed in changing economic sectors. You will also discover that : all sectors today are disrupted by disruptive innovations; thanks to exponential technological advances, new product offerings are more attractive in every way; the innovation processes of existing companies, designed for a progressive installation of new products on the market, are today inadequate; disruptive products are coming on line at an ever-increasing rate, so that success can be followed by a devastating setback; to survive disruption, you have to see demand as the ebb of the market and adapt to it by being extremely flexible. Disruptive innovations today have a disproportionate and devastating effect on companies. Their intervention signals the beginning of a compelling decline for companies. It is impossible to hope to compete with the new entrants by keeping its old models: salvation can only come from questioning and being highly responsive. A disrupted sector is full of potential, but also of dangers. The book "Big Bang Disruption" offers a diagnosis and a method for adapting to it. *Buy now the summary of this book for the modest price of a cup of coffee!

The proven, effective strategy for reinventing your business in the age of ever-present disruption Disruption by digital technologies? That's not a new story. But what is new is the "wise pivot," a replicable strategy for harnessing disruption to survive, grow, and be relevant to the future. It's a strategy for perpetual reinvention across the old, now, and new elements of any business. Rapid recent advances in technology are forcing leaders in every business to rethink long-held beliefs about how to adapt to emerging technologies and new markets. What has become abundantly clear: in the digital age, conventional wisdom about business transformation no longer works, if it ever did. Based on Accenture's own experience of reinventing itself in the face of disruption, the company's real world client work, and a rigorous two-year study of thousands of businesses across 30 industries, Pivot to the Future reveals methodical and bold moves for finding and releasing new sources of trapped value-unlocked by bridging the gap between what is technologically possible and how technologies are being used. The freed value enables companies to simultaneously reinvent their legacy, and current and new businesses. Pivot to the Future is for leaders who seek to turn the existential threats of today and tomorrow into sustainable growth, with the courage to understand that a wise pivot strategy is not a one-time event, but a commitment to a future of perpetual reinvention, where one pivot is followed by the next and the next.

Becoming worthy of the efforts and commitment of serious talent. --

"Go Slow to Go Fast" is the step-wise procedural approach that reviewers have called "a timely book that creates much needed dialogue" about how to challenge the norms using empirical findings that will 'work,' 'will matter' and 'will stick!' Others have stated the "usefulness of the text at a time where industries are facing a crisis in leadership; integrating a fresh approach from the objective advice offered throughout the text."

This book includes selected papers presented at the International Conference on Marketing and Technologies (ICMarkTech 2019), held at Maieutica Academic Campus (University Institute of Maia & Polytechnic Institute of Maia) in Maia, Portugal, from 27 to 29 November 2019. It covers up-to-date cutting-edge research on artificial intelligence applied in marketing, virtual and augmented reality in marketing, business intelligence databases and marketing, data mining and big data, marketing data science, web marketing, e-commerce and v-commerce, social media and networking, geomarketing and IoT, marketing automation and inbound marketing, machine learning applied to marketing, customer data management and CRM, and neuromarketing technologies.
