Military histories of the struggle against the French armies of the Revolution and Napoleon often focus on the exploits of elite units and famous individuals, ignoring the essential contribution made by the ordinary soldiers the bulk of the British army. Carole Divall, in

this graphic and painstakingly researched account, tells the story of one such hitherto ignored group of fighting men, the 30th Regiment of the Line. She takes their story from one of the opening clashes of the long war, the Siege of Toulon in 1793, to the decisive Battle of Waterloo in 1815. She gives us a fresh perspective on key events the men took part in Massenas retreat from the Lines of Torres Vedras, the bloody storming of Badajoz, the retreat from Burgos, the ordeal of the troops holding the centre of Wellingtons Waterloo position. The regiments history which she describes using some hitherto unpublished and vivid memoirs left by the men themselves and those they fought alongside offers a fascinating insight into the life of British soldiers two centuries ago.

Management Training Handbook covers every aspect of classroom management and illustrates how to tap into the teacher's most influential tool in the classroom: the person inside the teacher. Schools across the United States, as well as 15 other countries, use this text and accompanying training handbook to help train teachers to negotiate classroom problems. This book helps real teachers deal more effectively with administration, parents, substitute or cluster teaching, bullying, creating a safe classroom environment, and with students who demonstrate a variety of behavioral problems. The author, Howard Seeman, demonstrates how to handle and prevent these various situations. Included in each chapter are self-training, hands-on practice exercises and helpful guidelines and checklists to assist the beginning or veteran teacher. Online course and a live-action training DVD are available. Please contact Howard Seeman

A Concise Introduction to Languages, Machines and Logic provides an accessible introduction to three key topics within computer science: formal languages, abstract machines and formal logic.

Written in an easy-to-read, informal style, this textbook assumes only a basic knowledge of programming on the part of the reader.

The approach is deliberately non-mathematical, and features: -

Clear explanations of formal notation and jargon, - Extensive use of examples to illustrate algorithms and proofs, - Pictorial

representations of key concepts, - Chapter opening overviews

providing an introduction and guidance to each topic, - End-of-

chapter exercises and solutions, - Offers an intuitive approach to the

topics. This reader-friendly textbook has been written with

skills of the controllers and pilots and on reducing the number of aircraft in the air. The current and growing pressures to increase the capacity to handle a greater number of flights has led to a call for faster and more powerful equipment and for equipment that can take over some of the tasks now being performed by humans. Increasing the role of automation in air traffic control may provide a more efficient system, but will human controllers be able to effectively take over when problems occur? This comprehensive volume provides a baseline of knowledge about the capabilities and limitations of humans relative to the variety of functions performed in air traffic control. It focuses on balancing safety with the expeditious flow of air traffic, identifying lessons from past air accidents. The book discusses The function of the national airspace system and the procedures for hiring, training, and evaluating

Research on automation and human factors in air traffic control and incorporation of findings into the system. The Federal Aviation Administration's management of the air traffic control system and its dual mandate to promote safety and the development of air commerce. This book also offers recommendations for evaluation the human role in automated air traffic control systems and for managing the introduction of automation into current facilities and operations. It will be of interest to anyone concerned about air safety--policymakers, regulators, air traffic managers and controllers, airline officials, and passenger advocates.
