Download Ebook China S Urban Housing Revolution

The development of modern urban housing in China over the past 160 years is examined in this unique volume for the first time. From the beginnings of China's modernization after the Opium Wars to the latest trends adopted after the market reforms of the 1980s, this publication offers a broad overview of the developments in building construction and design. Extensively illustrated and written by a team of Chinese and Western experts, it is a must-have for anyone interested in the architecture of China. Urban housing in China is one of the most important components of China's modernization, industrialization, and urbanization. The period from 1840 to 2000 saw great changes in Chinese policy and society and is discussed in three stages: the modernization of China's semi-feudal, semi-colonial society, the rise of publicly owned housing under socialism in the People's Republic of China, and the rapid growth of a new market economy under Deng Xiaoping in the late 1970s. When examining changes in urban housing types, the authors take into account not only conventional architectural history, but also underlying political, economic, social, technological, and cultural forces. The result is a complete picture of the history of modern urban housing in China based on extensive literature and numerous field studies.

This in-depth volume explains China's residential construction boom and reviews how some established trends are likely to challenge its housing market in coming years. It draws on household surveys and public data in China and provides important lessons about housing policy for China and other countries.

This wide-ranging collection of essays by leading sociologists on the new consumerism of post-economic-reform China is an important contribution to our understanding of Chinese society and culture.

China is the most rapidly urbanizing nation in the world, with an urban population that may well reach one billion within a generation. Over the past 25 years, surging economic growth has propelled a construction boom unlike anything the world has ever seen, radically transforming both city and countryside in its wake. The speed and scale of China's urban revolution challenges nearly all our expectations about architecture, urbanism and city planning. China's ambition to be a major player on the global stage is written on the skylines of every major city. This is a nation on the rise, and it is building for the record books. China is now home to some of the world's tallest skyscrapers and biggest shopping malls; the longest bridges and largest airport; the most expansive theme parks and gated communities and even the world's largest skateboard park. And by 2020 China's national network of expressways will exceed in length even the American interstate highway system. China's construction industry, employing a workforce equal to the population of California, has been erecting billions of square feet of housing and office space every year. But such extensive development has also meant demolition on a scale unprecedented in the peacetime history of the world. Nearly all of Beijing's centuries-old cityscape has been bulldozed in recent years, and redevelopment in Shanghai has displaced more families than 30 years of urban renewal in the United States. China's cities are also rapidly sprawling across the landscape, churning precious farmland into a landscape of superblock housing estates and single-family subdivisions laced with highways and big-box malls. In a mere generation, China's cities have undergone a metamorphosis that took 150 years to complete in the United States. The Concrete Dragon: China's Urban Revolution and What it Means for the World sheds light on this extraordinary chapter in world urban history. The book surveys the driving forces behind the great Chinese building boom, traces the historical precedents and global flows of ideas and information that are fusing to create a bold new Chinese cityscape, and considers the social and environmental impacts of China's urban

Download Ebook China S Urban Housing Revolution

future. The Concrete Dragon provides a critical overview of contemporary Chinese urbanization in light of both China's past as well as earlier episodes of rapid urban development elsewhere in the world--especially that of the United States, a nation that itself once set global records for the speed and scale of its urban ambitions.

Recent rapid housing market expansion in China is presenting new challenges for policy makers, planners, business people, and citizens. Now that housing in middle-income China is driven by consumer choices and is no longer dominated by state policy decisions, housing policy issues in Chinese cities are becoming increasingly similar to those encountered in other global housing markets. With soaring prices and imbalances in housing supply favoring high income groups and housing demand driven by rising inequality in household incomes, many middle and lower-income households face worsening choices in terms of the quality and location of their housing as well as greater financial difficulties, which together can have negative implications for standards of public health. This book examines the impact of these changes on the general population, as well as on aspiring homeowners and developers. The contributors look at the effect on the widening of wealth gaps, slower economic growth, and threats to political and social stability. Though focusing on China, the editors also present discussions of specific policy design challenges encountered in Australia, Japan, Korea, the Netherlands, the Nordic countries, Singapore, Taiwan, the UK, and the US. This book would be of interest to housing policy makers, as well as academics who are studying the social and political effects of the Chinese housing market.

From Britain's 'Generation Rent' to Hong Kong's notorious 'cage homes', societies around the world are facing a housing crisis of unprecedented proportions. The social consequences have been profound, with a lack of affordable housing resulting in overcrowding, homelessness, broken families and, in many countries, a sharp decline in fertility. In Broken Cities, Deborah Potts offers a provocative new perspective on the global housing crisis arguing that the problem lies mainly with demand rather than supply. Potts shows how market-set rates of pay and incomes for vast numbers of households in the world's largest cities in the global South and North are simply too low to rent or buy any housing that is legal, planned and decent. As the influence of free market economics has increased, the situation has worsened. Potts argues that the crisis needs radical solutions. With the world becoming increasingly urbanized, this book provides a timely and urgent account of one of the most pressing social challenges of the 21st century. Exploring the effects of the housing crisis across the global North and South, Broken Cities is a warning of the greater crises to come if these issues are not addressed.

A timely and thorough analysis of the rapid urban growth in China.

By 2025, China will have built fifteen new 'supercities' each with 25 million inhabitants. It will have created 250 'Eco-cities' as well: clean, green, car-free, people-friendly, high-tech urban centres. From the edge of an impending eco-catastrophe, we are arguably witnessing history's greatest environmental turnaround - an urban experiment that may provide valuable lessons for cities worldwide. Whether or not we choose to believe the hype – there is little doubt that this is an experiment that needs unpicking, understanding, and learning from. Austin Williams, The Architectural Review's China correspondent, explores the progress and perils of China's vast eco-city program, describing the complexities which emerge in the race to balance the environment with industrialisation, quality with quantity, and the liberty of the individual

Download Ebook China S Urban Housing Revolution

with the authority of the Chinese state. Lifting the lid on the economic and social realities of the Chinese blueprint for eco-modernisation, Williams tells the story of China's rise, and reveals the pragmatic, political and economic motives that lurk behind the successes and failures of its eco-cities. Will these new kinds of urban developments be good, humane, healthy places? Can China find a 'third way' in which humanity, nature, economic growth and sustainability are reconciled? And what lessons can we learn for our own vision of the urban future? This is a timely and readable account which explores a range of themes – environmental, political, cultural and architectural – to show how the eco-city program sheds fascinating light on contemporary Chinese society, and provides a lens through which to view the politics of sustainability closer to home.

This book offers a unique historical documentation of the development of the ambitious religious entrepreneurship by leaders of the Early Rain church (and later Western China Presbytery leadership), in an effort to gain social influence in China through local institution-building and global public image management. It unravels the social processes of how this Christian community with a public image of defending religious freedom in China was undermined by an internal loss of moral authority. Based on publicly available texts from Chinese social media that aren't readily available in the West as well as in-depth interviews, it is framed by existing scholarship in social theories of the public sphere, charismatic domination in social transition, and the role of power in organizational behaviour. These churches' stories show how Christianity, which has long been politically marginalized in communist China, has not only adapted and challenged the socio-political status quo, but how it was also ironically shaped by the political culture. This is an insightful and critical ethnographic study of one of modern China's most famous house churches. As such, it will be of great interest to scholars of Religion in China as well as those working in Religious Studies, Asian studies, Chinese studies, and Mission Studies more generally.

A comprehensive study of contemporary memories of China's revolutionary epoch, from the time of Japanese imperialism through the Cultural Revolution. This volume examines the memories of a range of social groups, including disenfranchised workers and rural women, who have often been neglected in scholarship.
