China ' s Modernizing Military | Council on Foreign Relations

Among the most crucial areas of Chinese military modernisation is the expansion of its naval capabilities. The Gulf War of 1991 and the Taiwan Strait Crisis of 1995-1996 changed Chinese perceptions on having a competent navy to promote the country ' s maritime defence. The naval expansion was conducted in three phases.

China ' s Military Modernisation: Recent Trends | ORF

The military modernization program of the Chinese People's Liberation Army (PLA) which began in the late 1970s had three major focuses. First, under the political leadership of 3rd paramount leader Deng Xiaoping , the military became disengaged from civilian politics and, for the most part, resumed the political quiescence that characterized its pre- Cultural Revolution role.

With its fanatic national fervour, China is all set to achieve its legitimate place - the Middle Kingdom syndrome - in the emerging multi polar world order by 2050 AD. The most effective tool to achieve this is the Chinese Armed Forces - the PLA. The centrality of the PLA in China's internal and external policies has always remained unquestioned. China has recently embarked on a massive systematic programme for the modernisation of its Defence Services. Its short and long term objectives are yet to be assessed. The question now is, will a modernised professional military dance to the tune of the Chinese Communist Party? The impact of China's Defence modernisation on India's national security would be profound and direct. Are India & China natural rivals? What threats China poses for India? How should India respond to these challenges? This extensively researched book from a highly experienced soldier comprehensively examines all these & other related issues which should be of great interest for the China watchers.

China's rise to global economic and strategic eminence, with the potential for achieving pre-eminence in the greater-Asian region, is one of the defining characteristics of the post-Cold War period. For students contemplating a broad range of business, social science, journalist, or military science curricula, it is critical to possess a basic understanding of the military-strategic basis and trajectory of a Rising China. This work is intended to be attractive to a range of courses that require a volume that can provide background and outline current and future issues concerning China's rise in strategic-military influence.

China's strides towards the creation of a formidable military posture, backed by strong economic growth, demonstrate a resolve to assert its claim towards becoming an Asian superpower. By opting to showcase its military prowess to the world, the Chinese armed forces have signalled that they have come a long way from what was essentially a rustic and bucolic 'Red Army' that waged a 'People's War' six decades ago. The modernisation programme undertaken by the People's Liberation Army (PLA) can be interpreted as the foundation of deterrence to attain the objectives of military strategy. Today, the Chinese armed forces are preparing to fight small-scale, high-intensity, regional combat and military operations in the future. At the same time, China seeks to deter or prevent their outbreak decisively through the possession of an adequate deterrent force and the determination to use that force. Robust military modernisation of the PLA represents a contrasting facet to the tall claims made by China, in so far as its 'peaceful rise' campaign is concerned. It is difficult to reconcile these rather opposing, while equally reinforcing, ideas. As a consequence, the entire debate on the impending "China threat" (Zhongguo weixie) theory has progressively gained significance within the Asian continent and beyond.

Changing political relationships and a substantial increase in resources have prompted the Chinese leadership to accelerate the modernization of its armed forces. Observers, not least the United States, have wondered what objectives China's military buildup is meant to serve. The Chinese government's extreme secrecy about military budgets, force training, and weapon system procurement leaves considerable room for speculation. Perhaps naturally, China is believed to be preparing capacities for a possible conflict with Taiwan, which might or might not involve the United States. But other developments, like the modernization of strategic nuclear weapons and the acquisition of naval surface combatants, have raised the attention of analysts as to what role the Chinese armed forces will play in China's evolving security policy. This study provides an assessment of the current state of the Chinese People's Liberation Army (PLA). It addresses command structures, doctrine development, military spending, weapon system procurement, and the force structure of all four branches of the PLA. It does so by providing comparisons of current assessments of all aspects of PLA modernization and trend analyses that point out the developments in manpower, spending, and holdings of weapon systems, among others, over the past two decades. Thus, the volume seeks to lay a basis for a meaningful analysis of the role and trajectory of the Chinese military.

"Four essays ... analyze broad trends in Chinese military modernization. While they treat strategic capabilities ... the essays analyze considerably more. They look at the whole pattern of Chinese military modernization-- strategy, doctrine, information warfare, ground, naval and air forces. The essays come to ... much the same conclusion: that while the PLA ... is acquiring "pockets" of modern capabilities through a variety of legal and illegal endeavors, these selective acquisitions do not offset the overall obsolescence of most of China's armed forces. "

Examining Chinese intentions and the means they have to achieve those intentions, this volume begins with Roger Ames's essay analyzing the Chinese military through from the earliest times

This report from the CSIS Burke Chair in Strategy examines trends in Chinese strategy, military spending, and military forces based on Chinese defense white papers and other official Chinese sources; US reporting by the Department of Defense and other defense agencies; and other government sources, including Japanese and Korean defense white papers and the International Monetary Fund.

China ' s emergence as a global economic superpower, and as a major regional military power in Asia and the Pacific, has had a major impact on its relations with the United States and its neighbors. China was the driving factor in the new strategy the United States announced in 2012 that called for a " rebalance " of U.S. forces to the Asia-Pacific region. At the same time, China ' s actions on its borders, in the East China Sea, and in the South China Sea have shown that it is steadily expanding its geopolitical role in the Pacific and having a steadily increasing impact on the strategy and military developments in other Asian powers.

This book assesses the Sino-Japanese strategic competition in the context of the South China Sea (SCS) territorial disputes. The South China Sea territorial disputes are quickly becoming the most significant security problem in East and Southeast Asia. Two major powers, China and Japan, have interests in the region and are pursuing different strategies that can significantly impact the outcome of the disputes. Utilizing Securitization Theory, this study evaluates the Sino-Japanese strategic competition through political narratives that galvanize the military and economic policies that are transforming the region. It highlights how these narratives, so closely bounded to the political legitimacy of current governments and supported by provocative policies, have resulted in a co-constitutive pattern of enmity and securitization, thus making it increasingly difficult to resolve the disputes.
