The CSEC Human and Social Biology Concise Revision Course provides full coverage of the CSEC HSB syllabus. This book provides comprehensive and authoritative guidance for the course. It adopts a practical, supportive approach to help students with their learning. Revision exam and assessment guidance questions consolidate this learning. \* Full coverage of the CSEC Human and Social Biology course\* Advice on organising your revision includes tips on exam technique, explanations of exam command words, and guidance on drawing graphs, tables and diagrams\* Revision questions at the end of each topic help to secure knowledge and understanding\* Exam-style questions at the end of each section provide effective practice for the actual exam\* Answers are available for free at [www.collins.co.uk/caribbean](http://www.collins.co.uk/caribbean)

This CSEC Human and Social Biology Multiple Choice Practice book is a valuable exam preparation aid for CSEC HSB students. This book provides excellent practice for the multiple choice questions from Paper 1 of the CSEC examination, and has been specially written to help CSEC Human and Social Biology students improve their Paper 1 exam score.

These Study Guides have been developed exclusively with the Caribbean Examinations Council (CXC(r)) to be used as an additional resource by candidates who are following the Caribbean Secondary Education Certificate (CSEC(r)) programme. They provide candidates with extra support to help them maximise their performance in their examinations.

New up-to-date edition of this influential classic on Markov chains in general state spaces. Proofs are rigorous and concise, the range of applications is broad and knowledgeable, and key ideas are accessible to practitioners with limited mathematical background. New commentary by Sean Meyn, including updated references, reflects developments since 1996.

This comprehensive account of the human herpesviruses provides an encyclopedic overview of their basic virology and clinical manifestations. This group of viruses includes human simplex type 1 and 2, Epstein–Barr virus, Kaposi's Sarcoma-associated herpesvirus, cytomegalovirus, HHV6A, 6B and 7, and varicella-zoster virus. The viral diseases and cancers they cause are significant and often recurrent. Their prevalence in the developed world accounts for a major burden of disease, and as a result there is a great deal of research into the pathophysiology of infection and immunobiology. Another important area covered within this volume concerns antiviral therapy and the development of vaccines. All these aspects are covered in depth, both scientifically and in terms of clinical guidelines for patient care. The text is illustrated generously throughout and is fully referenced to the latest research and developments.

FEFLOW is an acronym of Finite Element subsurface FLOW simulation system and solves the governing flow, mass and heat transport equations in porous and fractured media by a multidimensional finite element method for complex geometric and parametric situations including variable fluid density, variable saturation, free surface(s), multispecies reaction kinetics, non-isothermal flow and multidiffusive effects. FEFLOW comprises theoretical work, modeling

experiences and simulation practice from a period of about 40 years. In this light, the main objective of the present book is to share this achieved level of modeling with all required details of the physical and numerical background with the reader. The book is intended to put advanced theoretical and numerical methods into the hands of modeling practitioners and scientists. It starts with a more general theory for all relevant flow and transport phenomena on the basis of the continuum approach, systematically develops the basic framework for important classes of problems (e.g., multiphase/multispecies non-isothermal flow and transport phenomena, discrete features, aquifer-averaged equations, geothermal processes), introduces finite-element techniques for solving the basic balance equations, in detail discusses advanced numerical algorithms for the resulting nonlinear and linear problems and completes with a number of benchmarks, applications and exercises to illustrate the different types of problems and ways to tackle them successfully (e.g., flow and seepage problems, unsaturated-saturated flow, advective-diffusion transport, saltwater intrusion, geothermal and thermohaline flow).

Databases are structured accumulations of data, built for easy access and retrieval of data as per requirement. Such data frameworks are constructed according to industrial or organizational needs. Large databases require elaborate and efficient database management systems. They are of two types-general and special purpose. It has applications across a number of fields such as library systems, website management, inventory management, etc. This book sheds light on the modern techniques and methods of database system design, their applications and management. It elucidates concepts and innovative models around prospective developments with respect to database systems. This book will serve as a valuable source of reference for professionals, researchers and students in the fields of computer science and engineering, information science, knowledge management and software engineering.

Intended for the students following the Human and Social Biology syllabus for CXC (CSEC). This illustrated work contains explanations on all topics and includes Caribbean examples. It is a useful resource for the students of this subject.
