---

Top 25 Data Analytics And Data Mining Blogs To Follow in 2020

Data analysis and data analytics are often treated as interchangeable terms, but they hold slightly different meanings. Essentially, the primary difference between analytics and analysis is a matter of scale, as data analytics is a broader term of which data analysis is a subcomponent. Data analysis refers to the process of examining, transforming and arranging a given data set in specific ways in order to study its individual parts and extract useful information.
