A comprehensive reference guide to the history and literature of exploration, travel and colonization from the earliest times to the year 1800. The vast scope of the Encyclopedia of Exploration makes it a work unlike any other in its combination of historical, biographical and bibliographical data. It includes a catalogue of all known expeditions, voyages and travels, as well as biographical information on the travellers themselves, which places them in their historical context. The

Encyclopedia of Exploration to 1800 is a massive undertaking resulting in a work that extends to 1.2 million words in almost 1200 pages. The 2327 major articles have generated index entries totalling more than 7500 names of persons or ships mentioned in the text. Within the text itself there are about 4000 cross-references between articles. Altogether nearly 20,000 bibliographical citations accompany the articles. A considerable quantity of information in this book is presented here for the first time in English.

Health Psychology is essential reading for all students

and researchers of health psychology. Organized into four sections, the 6th edition is structured with a clear emphasis on theory and evidence throughout. This textbook maintains its popular and balanced approach between the biomedical and psychosocial model, while strengthening its focus on critical thinking and behaviour change. Key updates include:

- Learning objectives: Each chapter opens with a set of learning objectives, which clearly outlines the knowledge, understanding and skills you will acquire from each chapter.
- Case studies: Each chapter includes a case study to illustrate how the key theories and ideas are relevant to everyday life.
- Through the Eyes of Health Psychology: A brand new feature to show how a

health psychologist might analyse each case study using the theories and concepts presented throughout the book.

- Health promotion: A whole chapter devoted to the theories and evidence relevant to behaviour change and includes a new section on integrated approaches and the drive to develop a new science of behaviour change.
- Thinking critically about: The process of thinking critically is introduced in the first chapter which describes how to think critically about theory, methods, measurement and research design. Each chapter has its own 'Thinking critically about ...' section at the end to highlight problems with specific theories and research areas. This section includes critical thinking questions and a 'Some

and judicial reform. His most significant work is the *Instauratio Magna* comprising two parts - *The Advancement of Learning* and *the Novum Organum*. The first part is noteworthy as the first major philosophical work published in English (1605). James Spedding (1808-81) and his co-editors arranged this fourteen-volume edition, published in London between 1857 and 1874, not in chronological order but by subject matter, so that different volumes would appeal to different audiences. The material is divided into three parts: philosophy and general literature; legal works; and letters, speeches and tracts relating to politics. Volume 8, published in 1862, contains letters, and miscellaneous writings relating to Bacon's political
