Diversity as a Similarity Measure To measure similarity between a target window and a template we ??st ??d for every target patch its Nearest Neighbor (NN), in terms of appearance, in the template. Our key idea is that the similarity between the target and the template is captured by two properties of the implied NN ?'ld.

Do you seek out cultural similarities in business? We talk a lot about cultural differences; identifying them, observing them, trying to work around them. Trying to discover common ground and to use these as a basis for a working relationship can often be a more positive approach in a cross-cultural environment. Here are a few points to consider:

The inclusion of 'similarity and difference' as a second-order concept within the National Curriculum is essentially concerned with helping students to move beyond stereotypical assumptions about people in the past, to recognise and analyse the diversity of past experience. While some degree of generalisation is essential in making claims about the past, paying attention to the extent of similarity and difference between different sorts of people - and between people within the same ...

Real values of a similarity index must be evaluated relative to the expected maximum value of that index, which is the value obtained for samples randomly drawn from the same universe, with the diversity and sample sizes of the real samples. It is shown that these expected maxima differ from the theoretical maxima, the values obtained for two identical samples, and that the relationship between expected and theoretical maxima depends on sample size and on species diversity in all cases ...

According to the Cambridge English Dictionary, diversity means: the fact of many different types of things or people being included in something; a range of different things or people.

This volume brings together interdisciplinary topics in condensed matter theory and related disciplines, with an emphasis on the common concerns of (mostly) theorists applying advanced many-particle methods in diverse areas: solid state and low temperature physics; atomic, sub-atomic, and statistical physics; engineering sciences, keeping a sharp focus on theoretical developments which cross borders between subfields of condensed matter physics and which provide new approaches to outstanding problems. The book records the fascinating variety of new results associated with the idea of similarity in diversity. In perusing this volume, the reader will be stimulated to discern threads of similarity in the great diversity of physical phenomena and theoretical models proposed to explain them; and indeed there are threads that can be glimpsed in the table of contents, and ramifications of these threads as one reads through the articles. One conclusion is clear: the search for similarity in diversity is a powerful approach to interdisciplinary science.

This book constitutes the proceedings of the 8th International Conference on Similarity Search and Applications, SISAP 2015, held in Glasgow, UK, in October 2015. The 19 full papers, 12 short and 9 demo and poster papers presented in this volume were carefully reviewed and selected from 68 submissions. They are organized in topical sections named: improving similarity search methods and techniques; metrics and evaluation; applications and specific domains; implementation and engineering solutions; posters; demo papers.

An enemy-or a friend? No way to know except the forbidden touch of an alien mind. This is the first novel in a compelling science fiction series. Similarity in Diversity documents experiential learning of exchange scholars from Malaysia and the USA. This anthology of personal essays presents the full range of cross-cultural experiences-experiences which enhance mutual understanding and create a sense of affinity among the exchange scholars. The personal essays in this collection are interesting, shocking, and unforgettable. Anyone who is interested in studying in the United States or going to Malaysia should read this book. This volume provides a rare perspective-observing a country from students' point of view. As students learn, share and make the connections, we create a better world for us and for future generations. While these essays do not necessarily present a representative picture either of Malaysia or the USA, the sketches do describe exchange experiences of interest to anyone who is concerned with people, cultures and diversity. The production of this book was partially sponsored by the Fulbright Academy of Science & Technology. www.FulbrightAcademy.org

Social capital may foster the integration of a society and the stability of a democracy. This volume examines the differences in levels, causes and consequences of social capital between 22 European countries surveyed in the 2002 European Social Survey. Multi-level analyses are used in each contribution

In recent years the fundamental concepts and applied methodologies of molecular similarity analysis have experienced a revolutionary development. Motivated by the increased degree of understanding of elementary molecular properties on the levels ranging from fundamental quantum chemistry to the complex interactions of biomolecules, and aided by the spectacular progress in computer technology and access to computer power, the area has opened up to many new ideas and new approaches. This book covers topics in quantum similarity approaches, electron density shape analysis methods, and it provides better theoretical understanding of molecular similarity. Additionally, quantitative shape analysis, especially activity relations (QShAR) and the prediction of the pharmacological or toxicological effects of molecules in the related context of quantum QSAR (QQSAR). This volume written by the experts in the various subfields of molecular similarity, provides a collection of the most recent ideas, advances, and methodologies. It is the hope of the Editors that by representing these topics within a single volume, the readers will find a balanced overview of the status of the field. We also hope that the book will serve as a tool for selecting and assessing the best approach for various new types of problems of molecular similarity that may arise and it will provide a set of easy references for further studies and applications.

This book constitutes the refereed proceedings of the 14th International Multimedia Modeling Conference, MMM 2007, held in Kyoto, Japan, in January 2007.
