Dosimetrie In

De Radiologie S

This book considers in depth all the factors that influence the radiation dose and the risk associated with MDCT in children and adults. Only a small proportion of referring clinicians, radiologists, and technologists are aware of both the

Download

Ebook

radiation risks and their underlying mechanisms. The book proposes detailed guidelines for optimization of the radiation dose when using MDCT. It is written by experts of international standing.

Based on the Lectures given during the Ispra-Course held

ultrasound.

Approaches

musculoskeletal

ultrasound from two

different viewpoints:

Download

Ebook

that of a specific diagnosis (Dx section), followed by that of a specific ultrasound appearance (DDx section). Differential diagnosis section features supportive images and text outlining the key discriminatory features necessary in reaching the correct

Download

Ebook

diagnosis. Provides a solid understanding of musculoskeletal ultrasound anatomy and pathology.

ICRP Publication 75 reports comprehensively on the principles for the protection of workers from ionising radiation. It develops guidance on the

Download

Ebook

Implementation of the principles in the 1990 Recommendations of the ICRP (ICRP Publication 60), including the concepts of constraint and reference levels. The report discusses the management of occupational exposure in normal and emergency situations, in Industrial

Download

Ebook

and medical contexts, and with respect to natural sources of radiation, including radon, at work. Health surveillance of workers and the management of overexposed individuals are considered. This report updates ICRP Publication 28 with respect to principles

Download

Ebook

and procedures for handling emergency and accidental exposures of workers, and, by laying out the principles of monitoring for external radiation, completely replaces ICRP Publication 35. Monitoring for radionuclide contamination is also discussed. The report

Download

Ebook

should also be of interest to a wide readership including all those responsible for occupational health, at operational and managerial levels, as well as regulatory bodies and professional organisations.

Guidelines for the clinical practice of

Page 47/56

Download

Ebook

medicine have been proposed as the solution to the whole range of current health care problems.

This new book presents the first balanced and highly practical view of guidelines--their strengths, their limitations, and how they can be used most effectively to

Download

Ebook

benefit health care.

The volume offers
Recommendations
and a proposed
framework for
strengthening
development and use
of guidelines.

Numerous examples
of guidelines. A ready-
to-use instrument for
assessing the
soundness of
guidelines. Six case

Download

Ebook

studies exploring issues involved when practitioners use guidelines on a daily basis. With a real-world outlook, the volume reviews efforts by agencies and organizations to disseminate guidelines and examines how well guidelines are functioning--exploring

Download

Ebook

issues such as patient information, liability, costs, computerization, and the adaptation of national guidelines to local needs.

ICRP Publication 74 provides an extensive and authoritative set of data linking the operational quantities defined by ICRU with

Download

Ebook

the dosimetric and protection quantities defined by ICRP. The operational quantities provide a satisfactory basis for most of the measurements for radiation protection against external radiations. In those cases where it is not so, the data given in the report provides a basis for designing

Download

Ebook

Special measurement programmes, properly interpreting their results and relating them to the protection quantities. The report should be useful to operational health physicists, medical physicists and those involved in the calibration of instruments and personal dosimetry.

Download

Ebook

Dosimetrie In

This Code of Practice, which has also been endorsed by WHO, PAHO and ESTRO, fulfils the need for a systematic and internationally unified approach to the calibration of ionization chambers in terms of absorbed dose to water and to the use of these
