The EN 71-3 standard is designed to assess the migration of certain chemicals into the body if a toy or components of a toy were to be swallowed by a child. In the EU, we assess the migration of these elements by immersing the toy in an acid, designed to represent stomach acid, for two hours. After this time, the acid is analytically measured to see whether chemicals such as lead, cadmium, mercury and others listed below are present.](#)

We have copies of EN71 certificates detailing chemical testing for a number of our cotton and polycotton fabrics. The exact fabrics which have been tested and are currently in stock are Yellow Animals and the plain Cotton Poplins (Colours tested are Black, White, Navy, Ivory, Red and Orange and all colours are printed in the same factory under the same conditions).

[EN71 Certificates—Sew Sew Fabrics](#)

A test report is used to prove that your product is compliant with EN 71. To obtain one, you must submit a batch sample to an accredited lab testing company (not any testing company will do). Once the lab test is done, you will receive a digital document, stating if the product is compliant or not.
