Science, Eric Dietrich claims, is the most open door into profound mystery that human beings have yet invented. Excellent Beauty urges science to wrest control of the discourse of mystery from religions, which have fiercely defended their claim to be the exclusive purveyors of mystery for centuries. The mystery science reveals is not a god who loves us, but an unknowable universe in which we must learn to take care of ourselves.

Eric Dietrich, Excellent Beauty: The Naturalness of Religion and the Unnaturalness of the World, Columbia University Press, 2015, 191pp., \$30.00 (hbk), ISBN 9780231171021. Many people intuitively tend to think that religion deals with the sacred, with awe and mystery, while science deals with the natural world, which it strips of wonder and "disenchants" (to use a phrase by the sociologist Weber).

Excellent Beauty boldly breaks the code of silence that keeps coolly rational academics from attempting to link evolution and theology. Dietrich reflects on some of the deepest mysteries of religious thought, but he does so from the viewpoint of a philosopher with deep training in logic and firmly grounded reasoning.

Flipping convention on its head, Eric Dietrich argues that science uncovers awe-inspiring, enduring mysteries, while religion, regarded as the source for such mysteries, is a biological phenomenon. Just like spoken language, Dietrich shows that religion is an evolutionary adaptation. Science is the source of perplexing yet beautiful mysteries, however natural the search for answers may be to human existence. Excellent Beauty undoes our misconception of scientific inquiry as an executioner of beauty, making the case that science has won the battle with religion so thoroughly it can now explain why religion persists. The book also draws deep lessons for human flourishing from the very existence of scientific mysteries. It is these latter wonderful, completely public truths that constitute some strangeness in the proportion, revealing a universe worthy of awe and wonder.

It's been said that software is eating the planet. The modern economy—the world itself—relies on technology. Demand for the people who can produce it far outweighs the supply. So why do developers occupy largely subordinate roles in the corporate structure? Developer Hegemony explores the past, present, and future of the corporation and what it means for developers. While it outlines problems with the modern corporate structure, it's ultimately a play-by-play of how to leave the corporate carnival and control your own destiny. And it's an emboldening, specific vision of what software development looks like in the world of developer hegemony—one where developers band together into partner firms of "efficiencers," finally able to command the pay, respect, and freedom that's earned by solving problems no one else can. Developers, if you grow tired of being treated like geeks who can only be trusted to take orders and churn out code, consider this your call to arms. Bring about the autonomous future that's rightfully yours. It's time for developer hegemony.

Consciousness lies at the core of being human. Therefore, to understand ourselves, we need a theory of consciousness. In Sisyphus's Boulder, Eric Dietrich and Valerie Hardcastle argue that we will never get such a theory because consciousness has an essential property that prevents it from ever being explained. Consequently, philosophical debates over materialism and dualism are a waste of time. Scientific explanations of consciousness fare no better. Scientists do study consciousness, and such investigations will continue to grow and advance. However, none of them will ever reveal what consciousness is. In addition, given the centrality of consciousness in philosophy, Dietrich and Hardcastle claim that philosophy itself needs to change. That the central problems of philosophy persist is actually a profound epistemic fact about humans. Philosophy, then, is a limit to what humans can understand. (Series A)

When young children first begin to ask 'why?' they embark on a journey with no final destination. The need to make sense of the world as a whole is an ultimate curiosity that lies at the root of all human religions. It has, in many cultures, shaped and motivated a more down to earth scientific interest in the physical world, which could therefore be described as penultimate curiosity. These two manifestations of curiosity have a history of connection that goes back deep into the human past. Tracing that history all the way from cave painting to quantum physics, this book (a collaboration between a painter and a physical scientist that uses illustrations throughout the narrative) sets out to explain the nature of the long entanglement between religion and science: the ultimate and the penultimate curiosity.

This book surveys and examines the most famous philosophical arguments against building a machine with human-level intelligence. From claims and counter-claims about the ability to implement consciousness, rationality, and meaning, to arguments about cognitive architecture, the book presents a vivid history of the clash between the philosophy and AI. Tellingly, the AI Wars are mostly quiet now. Explaining this crucial fact opens new paths to understanding the current resurgence AI (especially, deep learning AI and robotics), what happens when philosophy meets science, and the role of philosophy in the culture in which it is embedded. Organising the arguments into four core topics - 'Is AI possible', 'Architectures of the Mind', 'Mental Semantics and Mental Symbols' and 'Rationality and Creativity' - this book shows the debate that played out between the philosophers on both sides of the question, and, as well, the debate between philosophers and AI scientists and engineers building AI systems. Up-to-date and forward-looking, the book is packed with fresh insights and supporting material, including: - Accessible introductions to each war, explaining the background behind the main arguments against AI - Each chapter details what happened in the AI wars, the legacy of the attacks, and what new controversies are on the horizon. - Extensive bibliography of key readings

WHO BETTER TO FACE THE GREATEST EVIL OF THE 20TH CENTURY THAN A HUMBLE MAN OF FAITH? As Adolf Hitler and the Nazis seduced a nation, bullied a continent, and attempted to exterminate the Jews of Europe, a small number of dissidents and saboteurs worked to dismantle the Third Reich from the inside. One of these was Dietrich Bonhoeffer—a pastor and author. In this New York Times best-selling biography, Eric Metaxas takes both strands of Bonhoeffer's life—the theologian and the spy—and draws them together to tell a searing story of incredible moral courage in the face of monstrous evil. Metaxas presents the fullest accounting of Bonhoeffer's heart-wrenching decision to leave the safe haven of America to return to Hitler's Germany, and sheds new light on Bonhoeffer's involvement in the famous Valkyrie plot and in "Operation 7," the effort to smuggle Jews into neutral Switzerland. In a deeply moving narrative, Metaxas uses previously unavailable documents—including personal letters, detailed journal entries, and firsthand personal accounts—to reveal dimensions of Bonhoeffer's life and theology never before seen. "Bonhoeffer is the story of a life framed by a passion for truth and a commitment to justice on behalf of those who face implacable evil. Includes Readers' Guide "[A] beautifully constructed biography." —Alan Wolfe, The New Republic "Metaxas tells Bonhoeffer's story with passion and theological sophistication. . . ." —Wall Street Journal "[A] weighty, riveting analysis of the life of Dietrich Bonhoeffer. . . ." —Publishers Weekly "Metaxas presents Bonhoeffer as a clear-headed, deeply convicted Christian who submitted to no one and nothing except God and his Word." —Christianity Today "Metaxas has written a book that adds a new dimension to World War II, a new understanding of how evil can seize the soul of a nation and a man of faith can confront it. . . ." —Thomas Fleming, author, The New Dealers' War "Metaxas has created a biography of uncommon power—intelligent, moving, well researched, vividly written, and rich in implication for our own lives. Or to put it another way: Buy this book. Read it. Then buy another copy and give it to a person you love. It's that good." —Archbishop Charles Chaput, First Things "A definitive Bonhoeffer biography for the 21st century." —Kirkus Reviews 2011 ECPA Book of the Year 2011 Canterbury Medal by the Becket Fund recognizing courage in the defense of religious liberty 2011 Christopher Award winner highlighting the power of faith, courage, and action "A definitive Bonhoeffer biography for the 21st century." —Kirkus Reviews
