Exploring the Solar System - The New York Times

The exploration of our solar system is one of humanity's greatest scientific achievements. The last fifty years in particular have seen huge steps forward in our understanding of the planets, the sun, and other objects in the solar system. Whilst planetary science is now a mature discipline - involving geoscientists, astronomers, physicists, and others many profound mysteries remain, and there is indeed still the tantalizing possibility that we may find evidence of life on another planet in ...

moons, and smaller debris — is humankind ' s cosmic backyard. Small by factors of ...

Discovery and exploration of the Solar System - Wikipedia

EXPLORING THE SOLAR SYSTEM Ian Ridpath WE live on a planet called Earth, one of eight major planets orbiting a fairly average star called the Sun. The difference between a star and a planet is that a star is a hot body that gives out light of its own, whereas planets are cool and shine simply by reflecting sunlight.
