For the conservation of forest and its biodiversity, CFUGs are voluntarily involved in fencing, planting and meetings. It is helping in carbon sequestration and increasing the forest cover by controlling deforestation and forest degradation .

Community Forestry Management and its Role in Biodiversity ...

The Forest (Conservation) Act restricts the dereservation of forests or use of forest land for non-forest purposes. The Wildlife (Protection) Act provides for the protection of wild fauna and flora, for setting up of PAs, and has categorised wildlife species in six schedules with variable degree of punishment for possessing and/or transporting them.

Forest Biodiversity and Its Conservation in India

Biodiversity conservation is the protection and management of biodiversity to obtain resources for sustainable development. Biodiversity conservation has three main objectives: To preserve the diversity of species. Sustainable utilization of species and ecosystem. To maintain life-supporting systems and essential ecological processes.

Biodiversity Conservation - Different Methods And Strategies

The conservation of the world ' s biodiversity is thus utterly dependent on the way in which we interact with and use the world ' s forests. A new method used in 2011, put the total number of species on Earth at 8.7 million, of which 2.1 million were estimated to live in the ocean. [71]

Biodiversity - Wikipedia

People need nature — and for over 30 years, Conservation International has worked to protect it. Through cutting-edge science, innovative policy and global reach, we empower people to protect the nature that we rely on for food, fresh water and livelihoods. Learn More About Conservation International

Conservation International

Biodiversity is a reservoir of resources for the manufacture of food, cosmetic products and pharmaceuticals. Crops livestock, fishery, and forests are a rich source of food. Wild plants such as Cinchona and Foxglove plant are used for medicinal purposes.

Biodiversity and its significance - BIOLOGY TEACH

Strategies for Conservation of Biodiversity: The following strategies should be undertaken in order to conserve biodiversity: (1) All the possible varieties (old or new) of food, forage and timber plants, live stock, agriculture animals and microbes should be conserved.

Biodiversity: Types, Importance and Conservation Methods ...

Conservation is the strict protection of an area, or protection that is based on a separate management plan or other guidelines with the aim of safeguarding biodiversity. The protection of species is mainly ensured through the protection of their habitats and favouring the structural features of forests that the species need to thrive.

Biodiversity | UPM.COM

Forest Biodiversity Forests are biologically diverse systems, representing some of the richest biological areas on Earth. They offer a variety of habitats for plants, animals and micro-organisms. However, forest
