Hypertension In Adults Nice

This guideline covers identifying and treating primary hypertension (high blood pressure) in people aged 18 and over, including people with type 2 diabetes. It aims to reduce the risk of cardiovascular problems such as heart attacks and strokes by helping healthcare professionals to diagnose hypertension accurately and treat it effectively.

Hypertension in adults: diagnosis and management - NICE

In 2015, it was reported that high blood pressure affected more than 1 in 4 adults in England (31% of men; 26% of women) – around 13.5 million people – and contributed to 75,000 deaths. The clinical management of hypertension accounts for 12% of visits to primary care and up to £2.1 billion of healthcare expenditure.

Hypertension in adults: diagnosis and management - NICE

In adults aged under 40 with hypertension (with or without type 2 diabetes), what are the appropriate risk and blood pressure thresholds for starting treatment? To find out why the committee made the research recommendation on thresholds for interventions in adults aged under 40 see rationale and impact .

Hypertension in adults: diagnosis and management - NICE

The previous recommendations for people with type 2 diabetes (in NICE's guideline on type 2 diabetes in adults) suggested starting antihypertensive drug treatment if lifestyle interventions alone did not reduce blood pressure to below 140/80 mmHg or 130/80 mmHg in the presence of kidney, cerebrovascular or eye disease. However, this was based on evidence from 2 small studies in which the participants did not have hypertension.

Hypertension in adults: diagnosis and management | NICE

For adults aged under 40 years with hypertension, consider seeking specialist evaluation of secondary causes of hypertension and a more detailed assessment of the long-term balance of treatment benefit and risks. Monitor response to lifestyle changes or drug treatment. The National Institute for Health and Care Excellence (NICE) has produced:

Scenario: Management | Management | Hypertension - NICE

Stage 1 hypertension — clinic blood pressure ranging from 140/90 mmHg to 159/99 mmHg and subsequent ABPM daytime average or HBPM average blood pressure ranging from 135/85 mmHg to 149/94 mmHg. Stage 2 hypertension — clinic blood pressure of 160/100 mmHg or higher but less than 180/120 mmHg and subsequent ABPM daytime average or HBPM average blood pressure of 150/95 mmHg or higher.

Hypertension - not diabetic | Topics A to Z | CKS | NICE

Recommendations on the management of hypertension and blood pressure thresholds are from the National Institute for Health and Care Excellence (NICE)—Hypertension in adults: diagnosis and management guidelines (NG136, August 2019), and Scottish Intercollegiate Guidelines Network (SIGN)—A national clinical guideline: Risk estimation and the prevention of cardiovascular disease (SIGN 149, June 2017). These recommendations differ slightly.

Hypertension | Treatment summary - NICE

More than 25% of the adult UK population has hypertension, and in about 30% blood pressure remains uncontrolled.¹ In August, the National Institute for Health and Care Excellence (NICE) published its updated guideline on the diagnosis and management of hypertension. The guideline reviews further evidence that has emerged since it was last updated in 2011 from randomised trials investigating the initiation, monitoring, and choice of antihypertensive treatment.

Hypertension in adults: summary of updated NICE guidance ...

Hypothyroidism — hypertension may result from altered levels of renin, angiotensin, and aldosterone, and is associated with an increased diastolic blood pressure. Clinical features may include fatigue, weight gain, dry skin and hair loss, constipation, and muscle weakness. See the CKS topic on Hypothyroidism for more information.
