Let $a, b, c, d \in \mathbb{R}$ and consider each of the following statements. Decide which are true and which are false. Prove the true ones and give counterexamples to the false ones. a) If $a < b$ and $c < d < 0$, then $ac > bd$. b) If $a \leq b$ and $c > 1$, then $|a + c| \leq |b + c|$. c) If $a \leq b$ and $b \leq a + c$, then $|a - b| \leq c$.

If I have one criticism of some mathematical authors is that sometimes 'elegance' gets priority over explanation, and then 'mathematical maturity' becomes a requirement for introductory texts when it shouldn't really be the case. Rosenlicht's is a truly good Introduction to Analysis.

Maxwell Rosenlicht. 3.66 · Rating details · 88 ratings · 5 reviews. This well-written text provides excellent instruction in basic real analysis, giving a solid foundation for direct entry into advanced work in such fields as complex analysis, differential equations, integration theory, and general topology. The nominal prerequisite is a year of calculus, but actually nothing is assumed other than the axioms of the real number system.
