This brand-new manual prepares eighth graders throughout New Jersey to succeed on the required statewide science test. The author opens with a general overview of science—its purposes and methodology, its terminology, its close connection with mathematics, and its many different branches. Chapters that follow present introductions to the various sciences, from biology and ecology to physics and astronomy. Practice questions in every chapter help students measure their learning progress. The book concludes with two full-length practice tests with questions answered and explained.

Talk, talk, talk. There's an awful lot of talk about public education in America today. Have you ever wondered if even half of it is true?For example, have you ever wondered if our public schools are really failing or if they might actually be some of the best in the world? Have you ever wondered if „School Choice“ was actually about giving someone else more options and reducing freedom for you and your children? Ever wondered about the relationship between standardized testing and Nazi eugenics? How about if teachers unions should be doing more to fight for students' civil rights? And now that we're talking about it, why do white people sometimes snicker at black names? And how can you protect your children from toxic testing? Why does Common Core still exist? What's it mean to be racist in America today? And why do the rich need racists?If so, then you're cordially invited on a fantastic journey where few have gone before: into the mind of a public school teacher. Become a fly on the wall in our public school system. See what few non-professionals have seen before. It's an eye-opening experience guaranteed to ruffle a few feathers, but you've been warned: this is the work of a gadfly.

In an extensive review of teacher and school evaluation, one is not likely to find an issue more divisive than the question of how best, in high-stakes contexts, to evaluate how well teachers and schools accomplish their task of educating students. This book explores four contemporary approaches to evaluating the effectiveness of teachers and schools.

The IMLEM Plus edition of Hard Math is designed for students participating in both the Intermediate Math League of Eastern Massachusetts and Mathcounts(r). The topics align with modern middle school curricula: fractions, decimals, percents, prime factorization, plane and spatial geometry, probability, statistics, combinatorics, algebra, modular arithmetic, etc. But Hard Math challenges students to develop a deeper understanding; it asks much harder questions than standard texts and teaches the material and problem solving strategies students need to attack them. For example, rather than asking students to write  $\frac{2}{5}$  as a decimal, it might ask students to use the fact that  $99999 = 9 \times 41 \times 271$  to find the tenth digit in the decimal expansion for  $\frac{1}{271}$ . (It might ask this, but never actually does.) The organization is designed to serve IMLEM students' needs: the first five chapters cover exactly what students should learn for each of IMLEM's monthly contests. But the text can also serve students preparing for other math contests or as general enrichment. The IMLEM Plus edition of Hard Math can be used interchangeably with the IMLEM edition. The only difference is that the IMLEM Plus edition contains an extra chapter covering topics that do not appear on IMLEM contests, but which the author feels are useful to know if a student wants to do very well on Mathcounts(r).Mathcounts(r) is a registered trademark of the Mathcounts Foundation, which was not involved in the production of, and does not endorse, this book.
