This commentary refers to 2020 ESC Guidelines for the management of acute coronary syndromes in patients presenting without persistent ST-segment elevation by J.-P. Collet et al., doi: 10.1093/eurheartj/ehaa575.. We highly appreciate the discussion on the different recommendations of the 2020 European Society of Cardiology (ESC) Guidelines for the management of acute coronary syndromes ...

Management of acute coronary syndromes in patients

Management of acute coronary syndrome is targeted against the effects of reduced blood flow to the afflicted area of the heart muscle, usually because of a blood clot in one of the coronary arteries, the vessels that supply oxygenated blood to the myocardium. This is achieved with urgent hospitalization and medical therapy, including drugs that relieve chest pain and reduce the size of the infarct, and drugs that inhibit clot formation; for a subset of patients invasive measures are also employe

Management of acute coronary syndrome - Wikipedia

2020 ESC Guidelines for the management of acute coronary syndromes in patients presenting without persistent ST-segment elevation 2020 ESC Guidelines for the management of acute coronary syndromes in patients presenting without persistent ST-segment elevation Eur Heart J. 2020 Aug 29;ehaa575. doi: 10.1093/eurheartj/ehaa575. Online ahead of print.

2020 ESC Guidelines for the management of acute coronary

These conditions are managed similarly; the aims of management are to provide supportive care and pain relief during the acute attack and to prevent further cardiac events and death. For advice on the management of patients with acute ST-segment elevation myocardial infarction (STEMI), see below.

Acute coronary syndromes | Treatment summary | BNF content

Patients with acute coronary syndromes are at high risk of myocardial infarction and death. 4 Optimal treatment of patients with ST segment elevation myocardial infarction is clearly defined. 5 However, the management of patients with unstable angina and non-Q wave myocardial infarction remains controversial because of the heterogeneous nature of these conditions and recent advances in their treatment options.

Management of acute coronary syndromes | The BMJ

About this book Acute Coronary Syndrome covers the spectrum of clinical conditions ranging from unstable angina to non-ST elevation myocardial infarction and ST elevation myocardial infarction. These life-threatening disorders are a major cause of emergency medical care, hospitalization and mortality.

Management of Acute Coronary Syndrome | Wiley Online Books

Recently, data on a novel strategy of dual antithrombotic therapy (DAT) consisting of factor-Xa inhibition with a very low dose of rivaroxaban (2.5 mg b.i.d.) plus aspirin has emerged, and such a regimen should be considered as a treatment option for maintenance treatment beyond 12 months post ACS PCI.

2020 ESC Guidelines for the management of acute coronary

This quality standard covers diagnosing and managing acute coronary syndromes in adults (aged 18 and over). Acute coronary syndromes are medical emergencies that include myocardial infarction (heart attack) and unstable angina (unexpected, severe chest pain). It describes high-quality care in priority areas for improvement.

Overview | Acute coronary syndromes in adults | Quality

Long-term management of non-ST-segment elevation acute coronary syndrome (Supplementary data) Lifestyle management (Supplementary data) Smoking (Supplementary data) Diet and alcohol (Supplementary data) Weight management (Supplementary data) Physical activity (Supplementary data) Cardiac rehabilitation (Supplementary data)

ESC Guidelines on Acute Coronary Syndromes (ACS) in

The full presentation on the 2016 Clinical Guidelines for the Management of Acute Coronary Syndromes is a comprehensive presentation that covers all the recommendations in the new ACS guidelines. It contains a full description of the process used to develop the guidelines.

Acute Coronary Syndromes (ACS) clinical guidelines | The

Identify the current management of acute coronary syndromes (ACS). Identify the challenges in delivering treatment of ACS in the context of COVID-19. Describe the best practice for primary angioplasty for ST-elevation myocardial infarction in the COVID-19 era. Describe scenarios where thrombolysis should be considered.

Optimal management of acute coronary syndromes in the era

21 outcomes after management of acute coronary syndromes For a short explanation of why the committee made the 2020 recommendations on dual antiplatelet therapy for people with STEMI not treated with PCI, and how they might affect practice, see rationale and impact. Full details of the evidence and the committee's discussion are in evidence

Guideline Acute coronary syndromes - NICE

Contrast-enhanced computed tomographic angiography, or CTA, has become an integral part of the management of acute coronary syndrome due to its high sensitivity and specificity (Hoffman, Truong, Schoenfeld, Chou, Woodard, Nagurney, Pope & Udelson, 2012).
