Melt Extrusion: Materials, Technology and Drug Product Design

The melt extrusion process consists of melting the polymer pellets through a combination of applied heat and friction. This molten polymer is then forced under high pressure through a small orifice or, more typically, a “shower head” of orifices called a spinneret.

Melt Extrusion - an overview | ScienceDirect Topics

3.3. Solid dispersions with melt extrusion technology. Melt extrusion is a significant step forward to cover the technology related issues and makes the solid molecular dispersion approach a viable option. The viability of melt extrusion technology for the production of thin, flexible, acrylic films for topical drug delivery has been investigated by Aitken-Nichol et al. (). Lidocaine HCl was able to plasticize the acrylic polymer and the drug was completely dispersed at the molecular level ...
