The former superintendent at West Point and a psychologist explain why all successful leaders rely on a foundation of strong character. Among the most successful leaders throughout history—from Abe Lincoln to Rosa Parks, Mahatma Gandhi to Susan B. Anthony, Martin Luther King, Jr. to Nelson Mandela—some were brilliant mathematicians and economists, others were creative visionaries, still others were masterful at strategic planning. Their mastery of their field wasn't the secret to their highly effective leadership. All of their skill,

grit, resilience, charisma, and courage emanated from one thing: their strength of character. Character—the moral values and habits of an individual—is in the spotlight now more than perhaps at any other point in modern history. Politicians distort facts. Corporations cheat customers and investors. Athletes are caught using illegal supplements. In addition to harming our culture at large, these failures of character have a profound and undermining impact on leadership. The authors of this book are experts on the value of character, its correlation with successful leadership, and how to build it in individuals and prospective leaders. General Robert L. Caslen, Jr. served the US Army for over 43 years and served as Superintendent at the US Military Academy at West Point. Psychologist Dr. Michael D. Matthews is a Professor of Engineering Psychology at West Point who has focused on the psychology of character for years. Together they witnessed firsthand that raw talent is not enough to stand on its own; successful leadership relies on the critical foundation of a strong character. In *The Character Edge* they leverage their perspectives to offer an empowering, story-driven argument—backed by the latest scientific research—that character is vital to success. They give readers the tools to build and sustain character in themselves and their organizations by testing readers' strengths of the gut, head and heart and teaching how to build trust and nurture the seeds of character.

This is open access volume of the NL ARMS offers an interdisciplinary view on the domain of Compliance and Integrity in International Military Trade (CIIMT), integrating defence economics, international law, arms export control frameworks and policies, information management, organizational sciences and ethics. Although, in academia, and from an interdisciplinary perspective, CIIMT constitutes a relatively novel research domain, across private and public defence-related sectors, the subject evokes high levels of attention and interest, instigating a need for critical thinking, reflection and creativity to address ensuing multi-faceted issues and problems. The Faculty of Military Sciences at the Netherlands Defence Academy extends an in-house MSc programme on CIIMT, which, by integrating practice-based and scientific-based knowledge, aims to contribute to this need. The MSc programme on CIIMT is concerned with exploring, analysing, understanding, explaining, controlling and improving the military dimension in international military trade. More particularly, CIIMT studies managerial questions regarding strategic trade control of military and dual-use goods and services. CIIMT ties in with the Netherlands Defence Academy's vision on scientific education, embedded in the reflective practitioners' paradigm uniting both management and leadership skills needed to decide and operate in high-tension and high-risk knowledge intensive environments. The Faculty of Military Sciences uses the reflective practitioners' paradigm to refer to critical thinking, reflection and Bildung that characterize its thinking doers, the so-called Thinking Soldiers, either at the academic Bachelor's or Master's level. In view of the complexity of

the international trade regarding military and dual-use goods and services, the rapid evolvement of strategic trade control and frameworks, and its importance to procurement processes, defence organizations require innovative thinking doers, who, based on an in-depth understanding, from an interdisciplinary perspective can be expected to find - and take responsibility for - creative solutions to problems. NL ARMS 2021 comprises, amongst others, contributions from students and lecturers partaking in this programme. All the editors are affiliated with the Faculty of Military Sciences of the Netherlands Defence Academy in Breda, The Netherlands.

The integrity of knowledge that emerges from research is based on individual and collective adherence to core values of objectivity, honesty, openness, fairness, accountability, and stewardship. Integrity in science means that the organizations in which research is conducted encourage those involved to exemplify these values in every step of the research process. Understanding the dynamics that support " or distort " practices that uphold the integrity of research by all participants ensures that the research enterprise advances knowledge. The 1992 report *Responsible Science: Ensuring the Integrity of the Research Process* evaluated issues related to scientific responsibility and the conduct of research. It provided a valuable service in describing and analyzing a very complicated set of issues, and has served as a crucial basis for thinking about research integrity for more than two decades. However, as experience has accumulated with various forms of research misconduct, detrimental research practices, and other forms of misconduct, as subsequent empirical research has revealed more about the nature of scientific misconduct, and because technological and social changes have altered the environment in which science is conducted, it is clear that the framework established more than two decades ago needs to be updated. *Responsible Science* served as a valuable benchmark to set the context for this most recent analysis and to help guide the committee's thought process. *Fostering Integrity in Research* identifies best practices in research and recommends practical options for discouraging and addressing research misconduct and detrimental research practices.

This research and policy book examines the role of women in the military and the overwhelming evidence to date that warranted repealing the combat exclusion policy. It explores the following questions: How can the success of women in the military serve as justification for its repeal? What will be the potential impact of repealing the policy on the recruitment, promotion and retention of women in the military? How will repealing the combat exclusion policy change the ways in which military men relate to military women? How can repealing the policy set women on the course toward full agency and representation as full citizens in American society at large? Not only will this book help in filling the gaps of the existing literature of public administration and public policy about women in

the military but it will provide the personal insights of women who have served under the combat exclusion policy.

Essays on Canada's place in the world order.

Accountability, the heart of military leadership, is closely related to ethics, integrity, morality, and responsibility. This research paper first examines these relationships and illustrates some of the unique qualities of accountability which set it apart as the most critical element of leadership. Next is a discussion of where and to whom leaders are accountable, followed by an historical glimpse at military leaders and how their successes and failures were reflections of their accountability. The concluding section of this paper is a compilation of interviews with contemporary military leaders presenting their views regarding the urgency of accountability.

Artificial intelligence (AI) is a rapidly growing field of technology with potentially significant implications for national security. As such, the U.S. Department of Defense (DOD) and other nations are developing AI applications for a range of military functions. AI research is underway in the fields of intelligence collection and analysis, logistics, cyber operations, information operations, command and control, and in a variety of semiautonomous and autonomous vehicles. Already, AI has been incorporated into military operations in Iraq and Syria. Congressional action has the potential to shape the technology's development further, with budgetary and legislative decisions influencing the growth of military applications as well as the pace of their adoption. AI technologies present unique challenges for military integration, particularly because the bulk of AI development is happening in the commercial sector. Although AI is not unique in this regard, the defense acquisition process may need to be adapted for acquiring emerging technologies like AI. In addition, many commercial AI applications must undergo significant modification prior to being functional for the military. A number of cultural issues also challenge AI acquisition, as some commercial AI companies are averse to partnering with DOD due to ethical concerns, and even within the department, there can be resistance to incorporating AI technology into existing weapons systems and processes. Potential international rivals in the AI market are creating pressure for the United States to compete for innovative military AI applications. China is a leading competitor in this regard, releasing a plan in 2017 to capture the global lead in AI development by 2030. Currently, China is primarily focused on using AI to make faster and more well-informed decisions, as well as on developing a variety of autonomous military vehicles. Russia is also active in military AI development, with a primary focus on robotics. Although AI has the potential to impart a number of advantages in the military context, it may also introduce distinct challenges. AI technology could, for example, facilitate autonomous operations, lead to more informed military decisionmaking, and increase the speed and scale of military action. However, it may

Download File PDF Research Papers Military Integrity

also be unpredictable or vulnerable to unique forms of manipulation. As a result of these factors, analysts hold a broad range of opinions on how influential AI will be in future combat operations

ADP 6-22 describes enduring concepts of leadership through the core competencies and attributes required of leaders of all cohorts and all organizations, regardless of mission or setting. These principles reflect decades of experience and validated scientific knowledge. An ideal Army leader serves as a role model through strong intellect, physical presence, professional competence, and moral character. An Army leader is able and willing to act decisively, within superior leaders' intent and purpose, and in the organization's best interests. Army leaders recognize that organizations, built on mutual trust and confidence, accomplish missions. Every member of the Army, military or civilian, is part of a team and functions in the role of leader and subordinate. Being a good subordinate is part of being an effective leader. Leaders do not just lead subordinates—they also lead other leaders. Leaders are not limited to just those designated by position, rank, or authority.

The edited volume *Military Ethics and Leadership* explains how good leadership can keep soldiers from crossing the thin line between legitimate force and excessive violence.

The *Tongue and Quill* has been a valued Air Force resource for decades and many Airmen from our Total Force of uniformed and civilian members have contributed their talents to various editions over the years. This revision is built upon the foundation of governing directives and user's inputs from the unit level all the way up to Headquarters Air Force. A small team of Total Force Airmen from the Air University, the United States Air Force Academy, Headquarters Air Education and Training Command (AETC), the Air Force Reserve Command (AFRC), Air National Guard (ANG), and Headquarters Air Force compiled inputs from the field and rebuilt *The Tongue and Quill* to meet the needs of today's Airmen. The team put many hours into this effort over a span of almost two years to improve the content, relevance, and organization of material throughout this handbook. As the final files go to press it is the desire of *The Tongue and Quill* team to say thank you to every Airman who assisted in making this edition better; you have our sincere appreciation!
