The environment supports economic activity by man in four ways – it provides life support, supplies natural resources for production and consumption, absorbs waste products and supplies amenity services. The economy works from inside the environmental system and its activities affect the environment and the latter also affects the economy.

Environment and Economic Development | Economics

Some of the common examples of natural resources include land, water, coal, wood, sunlight, and oil. All these resources are distributed randomly across our planet, owing to which, every place has a set of its own natural resources, which aid in its economic development.

How Do Natural Resources Affect Economic Development ...

The Editor and Associate Editors, supported by a distinguished panel of advisors from around the world, aim to encourage submissions from researchers in the field in both developed and developing countries.

Environment and Development Economics | Cambridge Core

Economic development is not a blessing for the human beings. No doubt, it brings higher material welfare by increasing national output of goods and services on one hand and on the other hand it pollutes the environment badly by overuse and misuse of natural resources.

Economic Development and Sustainable Development

The business firms are related to the natural environment in two ways. First, they require natural resources such as land (for setting up industries), energy sources (coal, petroleum, gas—the natural products), wood and water for their production work.

Relationship Between Environment and Economic Growth

Overall, although our understanding of the role of natural resources in economic development has improved markedly in recent decades, there is still much to learn. How natural resource depletion is affecting the ecological services provided by the environment is one concern.

The Role of Natural Resources in Economic Development

The neoclassical economic theory of environment and natural resources is based on (1) the notions of individual preferences and subjective assessment of the value of consumer

(PDF) Environment and Development - ResearchGate

The principal factor affecting the development of an economy is the natural resources or land. " Land " as used in economics includes natural resources such as the fertility of land, its situation and composition, forest wealth, minerals, climate, water resources and sea resources etc. For economic growth, the existence of natural resources in abundance is essential.

Role of Natural Resources in Economic Development

Therefore, natural resource abundance seems likely to deter economic growth not only through the Dutch disease, rent seeking, and overconfidence that tends to reduce the quality of economic policy and structure as suggested by Sachs and Warner (1999) and various authors in Auty (forthcoming), among others, but also by weakening public and private incentives to accumulate human capital. If so, the adverse effects of natural resource abundance on economic growth since the 1960s that have been ...
