In a scenario where we have many document Content Types, we may want to enable Document ID - aka "Permanent Links" - which is a feature in SharePoint that assigns a specific ID for each document. That ID never changes even if the document is renamed or moved to another location. In this scenario, the Document ID field was being generated for some libraries/content types, but not others, which is a surprisingly common problem.

#SharePoint | Document ID not being generated

Sharepoint Document Id Not Generated In SharePoint the Document ID will normally move with the file. However, when the destination site does not have the Document ID service enabled, the document will no longer have a Document ID. Document ID feature enabled, Document ID settings set with a custom prefix and check box checked to reset all documents. After many days, no document ID on any existing documents or libraries. No document ID when uploading new documents.

Document ID not showing up in one site collection but ...

The easiest option available for you to display Unique ID fields in SharePoint is the ID field (column). It is an out of the box field that exists in both SharePoint lists and libraries. The way it works is pretty simple. The first item you create or add in your list or library gets an ID of 1, the next one 2, 3, and so on. It auto-increments itself. If the item is deleted, the ID is never re-assigned, so it is always unique. I explained how to display this ID Column in this post.

2 ways to create and display Unique ID fields in SharePoint
