researchers, academicians, and practitioners seeking current research on the different opportunities and challenges in relation to this specific sector of business around the globe.

More than one billion people still live below the poverty line – most of them in South Asia and Sub-Saharan Africa. Financial inclusion is a major issue, as more than three-quarters of the numbers of poor and disadvantaged women and men do not have access to financial products and services, such as bank accounts, affordable and suitable loans, and insurance. The key objective of this book is to provide practical case studies of financial inclusion, rather than focus on academic debates such as the ideological basis of promoting microfinance. Using the recently adopted Sustainable Development Goals as an overall framing of the issues, it shows how poor and disadvantaged women and men can be bankable if the right facilitation for maximizing opportunities and addressing constraints are in place. Case studies confirm that achieving inclusive and sustainable access to financial products and services goes beyond simply enabling poor and disadvantaged women and men to have access to credit, or the ability to open a bank account. Examples from Africa, Asia and Latin America demonstrate encouraging progress in making microcredit accessible to millions of poor people. The foremost challenge, however,

has been to ensure that they have access to, and usage intensity of, suitable and affordable financial products and services that meet the needs of their livelihoods as well as risks and mitigation strategies. This requires understanding that poor and disadvantaged women and men do not exist in isolation from complex and interdependent functions in the financial system, which includes a number of actors, diversified services, constraints (not just symptoms) and capacities and incentives. Overall, the book provides a rich source of examples of how building inclusive financial systems can empower the world's poor – by increasing income and employment opportunities, securing livelihoods and reducing poverty.

In 2011 the World Bank—with funding from the Bill and Melinda Gates Foundation—launched the Global Findex database, the world's most comprehensive data set on how adults save, borrow, make payments, and manage risk. Drawing on survey data collected in collaboration with Gallup, Inc., the Global Findex database covers more than 140 economies around the world. The initial survey round was followed by a second one in 2014 and by a third in 2017. Compiled using nationally representative surveys of more than 150,000 adults age 15 and above in over 140 economies, The Global Findex Database 2017: Measuring Financial Inclusion and the Fintech Revolution includes updated

indicators on access to and use of formal and informal financial services. It has additional data on the use of financial technology (or fintech), including the use of mobile phones and the Internet to conduct financial transactions. The data reveal opportunities to expand access to financial services among people who do not have an account—the unbanked—as well as to promote greater use of digital financial services among those who do have an account. The Global Findex database has become a mainstay of global efforts to promote financial inclusion. In addition to being widely cited by scholars and development practitioners, Global Findex data are used to track progress toward the World Bank goal of Universal Financial Access by 2020 and the United Nations Sustainable Development Goals. The database, the full text of the report, and the underlying country-level data for all figures—along with the questionnaire, the survey methodology, and other relevant materials—are available at www.worldbank.org/globalindex.

SMEs play a vital role in the Asian economy and comprise about 70% of the workforce and GDP in the region. To enhance productivity and ensure sustainable growth in Asia, it is vital to provide smooth financing to SMEs. Traditionally, commercial banks in Asia have regarded loans to SMEs as too risky relative to high transaction costs. However, new technologies including distributed ledger technology, cloud computing, and artificial intelligence are becoming a means of offering faster and more convenient and cost-effective financial services. The digital innovation could help SMEs to have easy access to finance in various routes. This book identifies and develops ideas on how to utilize new technologies to promote SME finance. It could encourage financial institutions and investors to develop new credit risk analysis tools, increase credit supply, and encourage sustainable growth for SME sectors. In addition, the book explores the ways policy makers and market participants could maximize the benefits while mitigating potential risks arising from the new digital era. The messages are important for the public and private sectors in Asia.

This report monitors SME and entrepreneur access to finance in 37 countries.

This is volume 2 of a three-volume publication on Bangladesh's trade prospects. Bangladesh's ambition is to build on its very solid growth and poverty reduction achievements, and accelerate growth to become a middle income country by 2021, and share prosperity more widely amongst its citizens. This includes one of its greatest development challenges: to provide gainful employment to the over 2 million people that will join the labor force each year over the next decade. Moreover, only 54.1 million of its 94 million working age people are employed. Bangladesh needs to use its labor endowment even more intensively to increase growth and, in turn, to absorb the incoming labor. The Diagnostic Trade Integration Study identifies the following actions centered around four pillars to sustain and accelerate export growth: (1) breaking into new markets through a) better trade logistics to reduce delivery lags ; as world markets become more competitive and newer products demand shorter lead times, to generate new sources of competitiveness and thereby enable market diversification; and b) better exploitation of regional trading opportunities in nearby growing and dynamic markets, especially East and South Asia; (2) breaking into new products through a) more neutral and rational trade policy and taxation and bonded warehouse schemes; b) concerted efforts to spur domestic investment and attract foreign

direct investment, to contribute to export promotion and diversification, including by easing the energy and land constraints; and c) strategic development and promotion of services trade; (3) improving worker and consumer welfare by a) improving skills and literacy; b) implementing labor and work safety guidelines; and c) making safety nets more effective in dealing with trade shocks; and (4) building a supportive environment, including a) sustaining sound macroeconomic fundamentals; and b) strengthening the institutional capacity for strategic policy making aimed at the objective of international competitiveness to help bring focus and coherence to the government's reform efforts. This second volume provides in-depth analysis across seven cross-cutting themes that underpin most of the findings of pillars 1 and 2 above.
