## Recode categorical variables - Stata

In Stata manual, there is an option (`bargap()`) for bar graph. It helps modify the distance between two bars. From what I read, if specify -30 for `bargap`, the two bars will overlap each other by 30% of the width of the bar. After your last reply, I did a lot of search and found a command `slideplot` to graph data recorded on a Likert Scale. I applied the command to my case:

Bar graph for categorical variables - Statalist

Stata Class Notes: Analyzing Data; Chi-square test. A chi-square test is used when you want to see if there is a relationship between two categorical variables. In Stata, the `chi2` option is used with the `tabulate` command to obtain the test statistic and its associated p-value.

What statistical analysis should I use? Statistical ...

Categorical Data Analysis. Categorical data is data that classifies an observation as belonging to one or more categories. For example, an item might be judged as good or bad, or a response to a survey might include categories such as agree, disagree, or no opinion. Statgraphics includes many procedures for dealing with such data, including
