GENERAL QUESTIONNAIRE

DESCRIPTION While the HAQ disability and pain scales are often referred to as "The HAQ", long term outcome assessment best includes the Full Five-Dimension HAQ, which is a comprehensive outcome measure that assesses a hierarchy of patient outcomes in four domains: 1) disability, 2) discomfort and pain, 3) drug side effects (toxicity) and 4) dollar costs.

QUESTIONNAIRE?

The Health Assessment Questionnaire (HAQ) was originally developed in 1978 by James F. Fries, MD, and colleagues at Stanford University. It was one of the first self-report functional status (disability) measures and has become the dominant instrument in many disease areas, including arthritis.

Health Assessment Questionnaires (HAQ, HAQ-II, MDHAQ ...

A health questionnaire asks series of questions of which the answers are interpreted to determine any disorder or problem with a person's overall health. A patient must always answer the questions with all honesty and of course, must input everything he/she knows about his/her health history including his/her family's medical history.

Capability for Work questionnaire

A health questionnaire is usually used to record the medical history of a patient. A questionnaire contains a series of questions that the patient would be required to answer. Based on the answers provided by the patients, the physician or the doctor would get a clear idea of the medical condition. This

UC50 form: Universal Credit capability for work questionnaire

Developed in 1978, the original Health Assessment Questionnaire Disability Index (HAQ) remains the gold standard for measuring functional status in RA (1). However, its length at 41 questions and relatively complex scoring can make clinical use difficult.
