This chapter focuses on historical and current approaches to measuring prejudice, stereotypes, and discrimination. A central distinction that motivates much of the chapter is between implicit and explicit measures, with the latter implying awareness and control over responses. In addition to reviewing a myriad of measurement approaches, we argue that measurement itself has fundamentally affected theories of the nature and origins of prejudice, stereotypes, and discrimination.

This Handbook provides a uniquely comprehensive and scholarly overview of the latest research on prejudice, stereotyping, and discrimination. All chapters are written by eminent prejudice researchers who explore key topics, by presenting an overview of current research and, where appropriate, developing new theory, models, or scales. The volume is clearly structured, with a broad section on cognitive, affective, and neurological processes, followed by chapters on some of the main target groups of prejudice - based on race, sex, age, sexual orientation, and weight. Migration moves people, ideas and things. Migration shakes up political scenes and instigates new social movements. It redraws emotional landscapes and reshapes social networks, with traditional and digital media enabling, representing, and shaping the processes,

relationships and people on the move. The deep entanglement of media and migration expands across the fields of political, cultural and social life. For example, migration is increasingly digitally tracked and surveilled, and national and international policy-making draws on data on migrant movement, anticipated movement, and biometrics to maintain a sense of control over the mobilities of humans and things. Also, social imaginaries are constituted in highly mediated environments where information and emotions on migration are constantly shared on social and traditional media. Both, those migrating and those receiving them, turn to media and communicative practices to learn how to make sense of migration and to manage fears and desires associated with cross-border mobility in an increasingly porous but also controlled and divided world. The SAGE Handbook of Media and Migration offers a comprehensive overview of media and migration through new research, as well as a review of present scholarship in this expanding and promising field. It explores key interdisciplinary concepts and methodologies, and how these are challenged by new realities and the links between contemporary migration patterns and its use of mediated processes. Although primarily grounded in media and communication studies, the Handbook builds on research in the fields of sociology, anthropology, political science, urban studies, science and technology studies, human rights,

development studies, and gender and sexuality studies, to bring to the forefront key theories, concepts and methodological approaches to the study of the movement of people. In seven parts, the Handbook dissects important areas of cross-disciplinary and generational discourse for graduate students, early career researcher, migration management practitioners, and academics in the fields of media and migration studies, international development, communication studies, and the wider social science discipline. Part One: Keywords and Legacies Part Two: Methodologies Part Three: Communities Part Four: Representations Part Five: Borders and Rights Part Six: Spatialities Part Seven: Conflicts
