Time Series Analysis comprised methods for analyzing time series data in order to extract meaningful statistics and other characteristics of the data. It is different from Time Series forecasting which is the use of a model to predict future values based on previously observed values. While time series analysis is mostly statistics, with time series forecasting enters Machine Learning.

Mathematical Model for Time Series Analysis. Mathematically, a time series is given as.  $y_t = f(t)$  Here,  $y_t$  is the value of the variable under study at time  $t$ . If the population is the variable under study at the various time period  $t_1, t_2, t_3, \dots, t_n$ . Then the time series is.  $t: t_1, t_2, t_3, \dots, t_n$ .
