Epithelium consists of closely packed, flattened cells that make up the inside or outside lining of body areas. There is little intercellular material. The tissue is avascular, meaning without blood vessels. Nutrient and waste exchange occurs through neighboring connective tissues by diffusion. The upper surface of epithelium is free, or exposed to the outside of the body or to an internal body cavity.

Epithelial Tissue - CliffsNotes Study Guides

BIO 176: Human Anatomy Lab Handout Page 1 of 16 Practice Pictures of Tissues Picture (You might see pictures that are not on PAL 3.0. These pictures have been labelled with what they are, you are also responsible for knowing them. They are on here because they are good examples of what the tissue ...

Tissues Study Guide Anatomy Pdf - 09/2020

Mesenchyme is the origin of all mature connective tissues. Mucous connective tissue is a temporary tissue formed during embryonic development. An epithelial membrane is a combination of epithelial and connective tissues working together to perform a specific function. As such, it acts as an organ.
