One such strategy is Total Productive Maintenance (TPM). TPM is a production-driven improvement methodology that optimises equipment reliability and ensures effective management of plant and assets using employee involvement and empowerment, by linking manufacturing, maintenance and engineering functions.

How to implement Total Productive Maintenance (TPM)

The eight pillars of total productive maintenance focus on proactive and preventive techniques to help improve equipment reliability. The eight pillars are: autonomous maintenance; focused improvement (kaizen); planned maintenance; quality management; early equipment management; training and education; safety, health and environment; and TPM in administration.

Total Productive Maintenance: An Overview | Reliable Plant

One of the main objectives of TPM – Total Productive Maintenance – is to create a shared responsibility for equipment by empowering operators to help maintain machines. The so-called autonomous maintenance can drastically improve productivity through increased up time, reduced cycle time and timely eliminated defects. Making TPM a substantial part of your industrial maintenance strategy for continuous improvement is definitely worth it.
