The problem I have with "Why we hate the oil companies" is not so much its message. By itself, it is rather interesting to read about the energy and environmental problem through vision of someone from the inside of what is usually portrayed as evil itself. This book does the job of giving that inside view quite nicely.

~~Why we should leave old oil rigs in the sea — and why we don't~~

The idea that we are subsidizing oil companies generates outrage in many people, but in this article I will show why these subsidies aren't going to go away any time soon. The reason may surprise you.

As president of Shell Oil, John Hofmeister was known for being a straight shooter, willing to challenge his peers throughout the industry. Now, he's a man on a mission, the founder of Citizens for Affordable Energy, crisscrossing the country in a grassroots campaign to change the way we look at energy in this country. While pundits proffer false new promises of green energy independence, or flatly deny the existence of a problem, Hofmeister offers an insider's view of what's behind the energy companies' posturing, and how politicians use energy misinformation, disinformation, and lack of information to get and stay elected. He tackles the energy controversy head-on, without regard for political correctness. He also provides a new framework for solving difficult problems, identifying solutions that will lead to a future of comfortable lifestyles, affordable and clean energy, environmental protection, and sustained economic competitiveness.

What would a de-carbonised society be like? What are the implications of a general de-globalisation for our social futures? How will our high-carbon patterns of life be restructured in a de-energized world? As global society gradually wakes up to the new reality of peak oil, these

questions remain unanswered. For the last hundred years oil made the world go round, and as we move into the century of 'tough oil' this book examines some profound consequences. It considers what societies would be like that are powering down; what lessons can be learned from the past about de-energized societies; will there be rationing systems or just the market to allocate scarce energy? Can virtual worlds solve energy problems? What levels of income and wellbeing would be likely? In this groundbreaking book, John Urry analyzes how the twentieth century created a kind of mirage of the future that is unsustainable into even the medium term and envisions the future of an oil-dependent world facing energy descent. Without a large-scale plan B, how can the energizing of society possibly be going into reverse?

In a forty-year career as an oil and gas investment analyst and as an investment banker and strategic adviser on petroleum-sector mergers, acquisitions, and financings, Thomas A. Petrie has witnessed dramatic changes in the business. In *Following Oil*, he shares useful lessons he has learned about domestic and global trends in population and economic growth, a maturing resource base, variable national energy policies, and dynamic changes in geopolitical forces—and how these variables affect energy markets. More important, he applies those lessons to charting a course of energy development for the nation as the twenty-first century unfolds. By the 1970s, when Petrie began analyzing publicly traded securities in the energy sector, the petroleum investment market was depressed. The rise of the Organization of Petroleum Exporting Countries (OPEC) pushed energy to the center of the national security calculus of the United States and its allies. Price volatility would continue to whipsaw global markets for decades, while for consumers, cheap gasoline prices soon became a fond

memory. Eventually, as Petrie puts it, finding oil on Wall Street became cheaper than drilling for it. Petrie uses this dramatic period in oil business history to relate what he has learned from “following oil” as a securities analyst and investment banker. But the title also refers to energy sources that could become available following eventual shrinkage of conventional-oil supplies. Addressing the current need for greener, more sustainable energy sources, Petrie points to recent large domestic gas discoveries and the use of new technologies such as horizontal drilling to unlock unconventional hydrocarbons. With these new sources, the United States can increase production and ensure itself enough oil and gas to sustain economic growth during the next several decades. Petrie urges the pursuit of cleaner fossil fuel development in order to buy the time to develop the technical advances needed to bridge the nation to a greener energy future, when wind, solar, and other technologies advance sufficiently to play a larger role.

Politics was once a term with an array of broadly positive connotations, associated with public scrutiny, deliberation and accountability. Yet today it is an increasingly dirty word, typically synonymous with duplicity, corruption, inefficiency and undue interference in matters both public and private. How has this come to pass? Why do we hate politics and politicians so much? How pervasive is the contemporary condition of political disaffection? And what is politics anyway? In this lively and original work, Colin Hay provides a series of innovative and provocative answers to these questions. He begins by tracing the origins and development of the current climate of political disenchantment across a broad range of established democracies. Far from revealing a rising tide of apathy, however, he shows that a significant proportion of those who have withdrawn from formal politics

are engaged in other modes of political activity. He goes on to develop and defend a broad and inclusive conception of politics and the political that is far less formal, less state-centric and less narrowly governmental than in most conventional accounts. By demonstrating how our expectations of politics and the political realities we witness are shaped decisively by the assumptions about human nature that we project onto political actors, Hay provides a powerful and highly distinctive account of contemporary political disenchantment. *Why We Hate Politics* will be essential reading for all those troubled by the contemporary political condition of the established democracies.

Here is a book for people at the very end of their tethers and desperate. From positive thinking to positive prayer, they feel they have tried everything yet remain tortured by a situation which has resisted every attempt to get rid of it. Nobody can wave a magic wand but if your own life is in crisis, help at last is in your hands. Whatever the situation you face, illness, addiction, financial ruin, unhappy relationship, Turn-Around will be a close companion, a concerned, worldly-wise uncle and aunt to take you through the practical steps that will lead to your overcoming your trauma and transforming your life. Written from a psychologically sound and spiritually centered perspective, this is not a religious tract but rather a spirited and earnest book written with compassion as well as humour. Succinct and to the point, it delivers the sort of straightforward help for which you have been starved. We guarantee genuine and even dramatic results.

Ecuador to Appalachia and from Germany to Norway. Not so long ago, people North and South had little reason to believe that wealth from oil, gas, and coal brought anything but great prosperity. But the presumption of net benefits from fossil fuels is eroding as widening circles of people rich and poor experience the downside. A positive transition to a post-fossil fuel era cannot wait for global agreement, a swap-in of renewables, a miracle technology, a carbon market, or lifestyle change. This book shows that it is now possible to take the first step toward the post-fossil fuel era, by resisting the slow violence of extreme extraction and combustion, exiting the industry, and imagining a good life after fossil fuels. It shows how an environmental politics of transition might occur, arguing for going to the source rather than managing byproducts, for delegitimizing fossil fuels rather than accommodating them, for engaging a politics of deliberately choosing a post-fossil fuel world. Six case studies reveal how individuals, groups, communities, and an entire country have taken first steps out of the fossil fuel era, with experiments that range from leaving oil under the Amazon to ending mountaintop removal in Appalachia.

A study of the erosion of American culture explores the general disillusionment and discontent that pervade Americans' lives, arguing that the social, spiritual, and philosophical turmoil that followed the 1960s collided headlong with the media and technology revolution at the end of the twentieth century to create an explosive cultural and ethical overload. 50,000 first printing.

face today. - United States Senator Edward M. Kennedy Hate is something that has always been with us. The difference today is that we recognize it and are attempting to understand it. What this book is primarily about, however, is hope - the hope that we can learn from the remarkable work of individuals and communities that have confronted hate and done something about it. -Michael Dukakis, Former Governor of Massachusetts, and Former Presidential Candidate Provocative and well-written, this book is recommended for all public and academic libraries. -Library Journal Levin and Rabrenovic have put together a well-written, well-researched and disturbing study of the violence in human nature. Rarely have I seen research that assembles so many recent examples of atrocities and religious, cultural and ethnic animosity in one book. As a student of the sociological foundation of violence and the burgeoning world of terrorism and nation-based hatred, I found the book a compelling read and research tool. As a member of the human species, I was glad to see examples of communities who have risen above the violence. The book lends a reader the possibility of hope. -Gary Fields, Wall Street Journal crime, terrorism and homeland security reporter Expressions of hate are an almost daily feature of the evening news, from the mayhem unleashed by suicide bombers in Israel to the unimaginable destruction of the Twin Towers. And since September 11, Americans have repeatedly asked themselves, Why do they hate us? In this in-depth look at the most troubling aspect of human nature, a prominent, nationally recognized criminologist, who is a leader in his field, and a respected sociologist seek to explain why hate exists and offer practical methods for creating a more peaceable society. Are we born with a propensity to hate, or is it something we learn? Does educating people necessarily reduce hate? Looking at biological, psychological, and cultural factors, Drs. Levin and

Rabrenovic investigate the evidence for hate as an inborn trait, as learned behavior, and as a reaction to envy, frustration, or the need for belonging, control, and authority. These highly regarded authors will reveal their new original findings on hate among Americans as well as the media's role in contributing to hate. They will also consider the phenomena of anti-Americanism and anti-Semitism before and after September 11, in addition to anti-Muslim sentiments in the wake of the Twin Towers attack. Also discussed are domestic terrorism and organized hate in the form of white supremacist and civilian militia groups. Finally, in surveying the many trouble spots around the world where hate is manifest, they describe a series of inspiring situations that show surprising cooperation between ethnic groups who have transcended hate, and the authors explain how they achieved it. Both enlightening and insightful, this momentous and timely work offers hope that civilized human beings can come to grips with an age-old problem.
